The Digital Vanguard

NEW Integrated Sensor Suite.

NEW Integrated Command Portal.

NEW Capabilities.

x500 Integrated Command Portal

Chemical Warfare Agent and TICs & TIMs Detector

Lower Explosive Limit (LEL) O₂ Four Gas Sensor and Explosive Detector

Meteorological GPS Station

Radiation Detector

Med-Eng and ICP Newtech have partnered to introduce the ROVISS Integrated Sensor Suite. ROVISS provides a powerful capability to manage high threat situations by deploying multiple sensors concurrently. All sensor information is fused into a single computer on-board the Digital Vanguard and relayed to the new x500 Integrated Command Portal to provide a clean and effective display and management tool.

The software uses ATP45e and AEP45(C) protocols to map the incident based on the sensor data. Depending on the mission, ROVISS can manage sensors for Explosives, Radiation, Chemical Agents, TICs & TIMs and Meteorological data.

To learn more about ROVISS and the x500, please contact your authorized Med-Eng representative.
